Blessed G/Michael Catholic Secondary School

1st Semester Biology Test Two for Grade 10th

Dec, 2018 E.C Time Allowed 40min'

Name Bitanya Wondemagegnehu Section 10th B No 12

I. **Match column A with column B**

Column A	Column B
B 1. Eucalyptus golbulus	A .Treatment of tapeworm
A 2. Lepiddium sativum	B .Treatment of intestinal parasites
E 3. Niglella sativa	C. Treatment of cold
C 4. Hagenia abysinica	D .Treatment of bronchial asthma
D 5. Rosmarinus officinalis	E .Treatment of diarrhoea

II. Choose the best answer among the given alternatives

B 6. Clinostat is used in the study of ?
A .Osmosis B .Growth movements C .Leaf transpiration D .Photosynthesis

A 7. In photolysis some of the energy captured by chlorophyll is used to split ?
A H2O B.NADPH C .CO2 D .ATP

B 8. The relative effectiveness of different wavelengths of light in photosynthesis is demonstrated by ?
A .Absorption spectrum B .Action spectrum C Photolysis D .Antenna complex

A 9. In plants the final electron acceptor in the light dependent reaction is ?
A H2O B .NADP C.CO2 D .G3P

C 10. Where is the chlorophyll located in the chloroplast ?
A .Stroma B .Thylakoid lumen C .Thylakoid membrane D .Inter membrane space

D 11. Ice floats on top of water this property is important ?
A .To facilitate the nutrient cycle
B .To insulate the bottom part of water from freezing
C .To insulate the heat produced by under water organism from escaping out D .all

B 12. Which property of water enables smaller insects such as raft striders to walk on water without breaking the surface of water ?
A .High latent heat of vaporisation C .High heat capacity
B .High surface tension D .High viscosity

A 13. Which of the following is the most abundant element in the body ?
A .Hydrogen B .Oxygen C .Carbon D .Nitrogen

B 14. Which of the following groups of substances are all inorganic ?
A .Sugar ,fatty acid ,amino acid C .Fatty acid ,glucose ,carbon dioxide
B .Water carbon dioxide ,calcium carbonate D .citric acid ,formic acid ,carbon monoxide

AB 15. Why must the leaf be boiled in alcohol before testing
A .To kill the leaf C .To soften the leaf
B .To remove chlorophyll D .To add iodine

B 16. What does the presence of starch in a leaf indicate
A .The plant has sufficient water C .The plant has a high concentration of chlorophyll
B .The plant has been photosynthesizing D .The plant has been actively respiring

C 17. When a plant is placed horizontally where does auxin accumulate in the root and what is the effect of growth?
A Accumulates at the top, and promoting faster growth
B .Accumulates at the bottom, and promotes faster growth
C .Accumulates at the bottom, and inhibiting growth
D .Accumulates at the top, and inhibiting growth

B 18. In a growing seedling exposed to unilateral light, where does the hormone responsible for growth accumulate?

A .On the illuminated side C .In the tip

B .On the shaded side D .It distributed uniformly

A B 19. If the tip of a coleoptile is cut off and placed back on the stump, but a light proof barrier is inserted between the tip and stump what happens when exposed to unilateral light?

A .The coleoptile grows straight up without bending

B .The coleoptiles bends towards the light normally

C .The coleoptiles bends away from the light source

D .The coleoptiles dies due to lack of light

A 20. What is the primary purpose of the ringing experiment?

A .To demonstrate the phloem is responsible for food transport

B .To demonstrate the function of xylem in water transport

C. To study root pressure

D .To determine the rate of photosynthesis in leaves

C 21. Which of the following best describes the structure of xylem?

A. Composed of living cells with a nucleus

B .Composed of living cells with sieve plates

C. Composed of dead cells that form hollow tubes reinforced with lignin

D .Composed of parenchyma cells that perform active transport

A 22. In which direction does sugar transport occurs in phloem?

A .Down wards only C .Only roots from leaves

B .Both upwards and down wards from sources to sink D. only from roots to leaves

B 23. Calcium ions are important for ?

A .Responsible for transmitting nerve impulses

B .For proper bone formation

C . For muscle contraction D .all

B 24. Which one of the following ions play a very important role in ATP synthesis in the mitochondria during cellular respiration?

A H+ B.K+ C .Na + D . Cl-

A 25. Which one of the following diseases causes abnormal cupper metabolism ?

A .Wilson's disease B .Hemosideriosis C .Hemochromatosis D .all

C 26. An extracellular cat ion that regulates blood pressure is?

A. H+ B.K+ C .Na + D . Cl-

D 27. Which one of the following ions acts as cofactors to activate an enzyme salivary amylase?

A. H+ B.K+ C .Na + D. Cl-

III. Fill in the blank

28. Iodine ion is used for the synthesis of thyloide hormone

29. Guarma is the only epidermal cells that contains chloroplasts mesophyl

30. The rise of water in fine tubes when adhesive force exceeds cohesive force is called capillarity force
