Blessed G/Michael Catholic Secondary School

2nd Semester Biology test one for Grade 10th

March, 2018 E.C

Time Allowed 40

Name: Betanya Wondmagegnehu Sec: 10th B R.No. 12

I. Choose the best answer among the given alternatives.

31. **Which** of the following best describes the event occurring during anaphase I ?

A .Sister chromatids separate and move to opposite poles ✗ Anaphase II

B .Homologous chromosomes separate and move to opposite poles

C. Sister chromatids remain attached at their centromeres

D .None sister chromatids exchange genetic material

2. Which event in prophase I is responsible for increasing genetic variation ?

A .Synapsis B .Condensation C .Crossing over D .Nuclear envelope break down

3. Which statement regarding gametogenesis (gamete formation) is true ?

A .Meiosis in females produces four functional haploid cells ✗

B .Meiosis in males produces four functional haploid cells ✓

C. meiosis in both males and females is identical in duration

D Meiosis I in females is completed before birth

C 4. Which of the following is the main purpose of meiosis ?

A .Growth and tissue repair ✗ C .Production of gametes for sexual reproduction

B .Asexual reproduction ✗ D .Producing identical daughter cells

A 5. When do homologous chromosomes separate during meiosis ?

A .Anaphase I B. Prophase I C .Prophase II D .Anaphase II

B 6. Meiosis II is similar to mitosis because ?

A .Homologous chromosomes separate ✗ C .DNA replication occurs before hand

B Sister chromatids separate D .Four haploid cells are produced

A 7. Synapsis is the process where by ?

A Homologous chromosomes becomes closely associated

B .Homologous pairs of chromosomes separate

C .Homologous chromosomes exchanges chromosomal material

D .The daughter cells contain half of the genetic material

C 8. Which of the following hydrolytic enzymes act at low PH (1-2) ?Pepsin

A .Trypsin B .Erepsin C .Pepsin D .Amylase

C 9. The activation of pancreatic trypsinogen to trypsin is catalysed by which enzyme located on the intestinal brush ?

A ,Carboxy peptidase B .Amino peptidase C .Enterokinase D .Amylase

10. What is the role of bile salts in the digestion of fats? B

A Hydrolysis of triglycerides in to fatty acids

B .Emulsification of fats to increase surface area for lipase

C .Active transport of fat droplets into lacteals

D .Directly break down chylomicrons

11. Which of the following is not a component of pancreatic juice ? A

A . Bile salts liver B .Trypsinogen C .Bicarbonate ions D .Amylase

12. Which part of the stomach is attached to the oesophagus ? B

A .Fundus B .Pylorus C .Cardiac D .All

13. Which of the following substance is directly absorbed in the stomach ? D

A .Drugs B .Alcohol C .Glucose D .A &B

14. The large intestine removes water from undigested remains and is connected to the small intestine at the ? B

A .Rectum B .Caecum C .Colon D .Appendix

15. Which of the following vitamins released by bacteria in the colon ? C

A .Vitamin D B .Vitamin C C .Vitamin k ~~B~~ D .Vitamin E

16. The appendix is a structure that comes off the ? C

A .Transverse colon B .Ascending colon C. Sigmoid colon D .Descending colon

17. Which hormone released in response to acidic chyme and fatty acids in the duodenum ,stimulates the pancreas to secrete bicarbonate rich fluid ? C

A .Gastrin gastric juice B. Cholestokinin pancreatic C .Secretin D .Motilin

18. Which of the following enzymes is not secreted by the intestinal epithelial cells ? A

A Trypsin pancreas B .Maltase C .Lactase D .Sucrase

19. The part of the large intestine starting from the part closest to the small intestine are the ? B

A .Caecum ,ascending ,transverse ,descending and sigmoid colon ,rectum and anal canal

B . Caecum, ascending, transverse, descending and sigmoid colon , anal canal and rectum

C .Caecum ,descending ,transverse ,ascending and sigmoid ,rectum and anal canal

D .Ascending ,transverse ,descending and sigmoid colon ,caecum ,rectum and anal canal

20. The main function of the large intestine is ? D

A .To store the residues of food and absorb water electrolytes

B .Mixing the propulsion of chime at a rate of 50-100cm/hr

C .The further digestion and absorption of nutrients

D .Defecation

21. Which of the following is absorbed into the lacteals rather than the blood capillaries ? C

A .Glucose B Amino acids C .Fatty acids D .Water soluble vitamins

22. Which vitamins requires intrinsic factor for absorption in the ileum ? A

A .Vitamin C B .Vitamin B_{12} C .Vitamin A D .Vitamin K_1

B 23. What is the most mineralised tissue in the human body ?

A .Dentine B .Enamel C . pulp D . Cement

B 24. Which teeth is not found in deciduous dentation (milk teeth) ?

A .Incisors B .Premolars C .Molars D .Canines

C 25. The vitamin which is essential for the formation of strong teeth is ?

A .Vitamin A .B .Vitamin D C .Vitamin K D .Vitamin B

II. Fill in the blank

26. The movement of food from the stomach to the duodenum is called --peristalse

27. Partially digested food in the stomach is called --Chyem

28. The sphincter that connects the stomach and the duodenum is called --Pyloric sphincter (small intestine)

29. The stage in meiosis where by sister chromatids separate and migrate towards opposite poles is called ------ Anaphase II

30. Bile salts are made from -Liver

25

Name Bitanya Wondemagegnehu **Section** 10th B **No** 12

1. B	6. B	11. A	16. C	21. C
2. C	7. A	12. B C	17. C	22. A B
3. B	8. C	13. D C	18. A	23. B
4. C	9. C	14. B C	19. B A	24. B
5. A	10. B	15. C	20. D A	25. C B

26. persetalse

27. Chyem

28. Pyloric Sphincter

29. Anaphase II

30. Liver
