Blessed G/Michael Çatholic Secondary School

2nd Semester Biology Test One for Grade 11th

March, 2018 E.C

Time Allowed -50min'

Name ______________________________ Grade 11 Section __________ No __________

I. Write true if the statement is correct or false if the statement is incorrect.

F 1. External fertilization is a sign of advanced reproductive method in animal king dom.
Tru 2. The eggs of reptiles are covered by hard shells for protection.
True 3. Blastopore is produced by a process of gastrulation.
True 4. Cutting tree terminals instead of branches is unethical treatment of plants.

II. Match natural substances in column A with technologies imitated from then in column B.

A

C 1. Mound architectures of termites
E 2. Kangaroo movement
D 3. Mosquito proboscis
G 4. Spin silks of spider's
B 5. Neurons
I 6. Movement of Snake
F 7. Elephant trunk

B

A. Building design
B. Sensors of electrical devices
C. Building houses with constant temperature & moisture
D. Injectable needles
E. Movement of bio-robots
F. Robotic Arm
G. Synthetic bullet proof vests
H. Photographic camera
I. Movement of robotic arms in industries

II. Choose the best answer from the given alternatives.

B 1. Which of the following is not the importance of biological knowledge?
A. Ensuring food security.
B. Producing biological warfare.
C. Achieving better supply of energy & clean water
D. Improve health & longevity of human beings.

C 2. Which method of reproduction produces identical offspring and is most successful in a stable environment?
A. Sexual reproduction
B. Conjugation
C. Asexual
D. Inbreeding

A 3. External fertilization is common in one of the following environment?
A. Aquatic
B. Savannah
C. Forests
D. Mountainous

B 4. Which of the following structures is involved in mating among birds?
A. Uterus
B. Cloaca
C. Spermatheca
D. Coelom

A 5. The reason why all vertebrate are chordate but not all chordates are vertebrate is?
A. Chordates have only nerve cord while vertebrates have both nerve cord and vertebral column.
B. Vertebrates have only nerve cord while chordates have both nerve cord and vertebral column
C. Chordates donot have amnion while vertebrates have amnion.
D. All are true.

D

6. Which of the following is true about shellac?
   A. It is used for making dyes and inks.
   B. It is used for making polishes and sealing waxes
   C. It is produced by insects
   D. All are true.
7. What happens to the number of cells during cleavage?
   A. increases
   B. decreases
   [✓ C. doubles with every cell division]
   D. does not change significantly
8. Which of the following insects are used in natural biological pest control?
   A. Stagmomantis
   B. Hover flies
   C. Chilomenes sulfurea
   D. All are possible answers
   E. All except B.
9. Which germ layer forms the skin cells?
   A. Endoderm
   [✓ B. Ectoderm]
   C. mesoderm
   D. Tophoblast
10. What is necessary for normal human fertilization to occur?
   A. Many eggs must be released.
   B. The uterus must be enlarged.
   C. One sperm needs to penetrate one egg.
   D. Secretion of pituitary FSH and LH must decrease.
11. In which group ~~is~~ of animals is parthenogenesis a normal reproductive event?
   A. Chickens
   B. Bees
   C. Lizards
   [✓ D. all except A]
12. Genetically unique individuals are produced through ________.
   [✓ A. Sexual reproduction]
   B. budding
   C. parthenogenesis
   D. fragmentation
13. Which of the following isnot an example of an economically beneficial insect?
   [✓ A. *Musca domestica*]
   B. *Dacyloplus coccus*
   C. *Bombyx mori*
   D. *Laccifer lacca*
14. Which one is false about complete and incomplete metamorphosis?
   A. complete metamorphosis has four stages with different shapes and size
   [✓ B. Incomplete metamorphosis has three stages with different shapes and size]
   C. Incomplete metamorphosis is common in grass hopers
   D. Complete metamorphosis is common in house flies and honey bees
15. Worker honey bees in a colony:
   A. Are all sterile females
   B. Have the same mother
   C. Are diploid
   [✓ D. All of the above]
16. Approaches to biological control tactics include classical, augmentative and conservation. Classical biological control is the:
   [✓ A. Preservation of natural enemies (predators & parasitoids) that are already established in an area]
   B. Importation and release of an insect pest to a new area to provide hosts for natural enemies
   C. Culture and release of natural enemies that are already established in the field, but that need a "boost" to effectively control the insect pest species
   D. Importation and release of natural enemies from the native home of an alien insect pest that has invaded a new area

the major cereal and pulse crops & true

D 17. Chitin is a very important part of the insect's exoskeleton because:
A. It is impermeable to water. C. It is rigid and inflexible.
B. It is not digested by common enzymes. D. It is flexible and elastic.

A 18. House Fly larvae (maggots) move away from a bright source of light. This is an example of a
A. Taxis B. Reflex C. Kinesis D. Transverse orientation

A 19. Behavior patterns that change drastically over the lifetime of an insect are probably:
A. Learned B. Innate C. Imprinted D. Afferent

20. When predator changes its search image in response to a change in the density of prey, it exhibits a(n):
A. Numerical response B. Functional response C. Conditioned response D. None of these

D 21. Insects are considered to be beneficial because they:-
A. are effective pollinators C. are source of useful products and potential protein
B. act as biological control agents. D. All of above

22. A male Empiid fly courts a female for 20 minutes and then gives up after he fails to elicit any response.
This is an example of:- Trial & error
A. Conditioning B. Imprinting learning early in life (following mother) C. Habituation [✓ D. Instrumental learning]

B 23. Which one of the following has haploid chromosomes?
A. Queen B. Drone C. Workers D. All of these

D 24. Commercial rearing of honey is called
A. Sericulture B. Lac culture C. Floriculture D. Apiculture

B 25. Which one is false about what instinctive behavior are different from simple reflexes?
A. instincts are complex multistep responses
B. instincts are always protective responses.
C. instincts are selected through evolutionary processes.
D. instincts are originated from our brain and done consciously.

B 26. Which one is false about the phases of embryonic development for sexually reproducing animals?
A. Three layered embryo is called gastrula. C. Gastrulation process forms blastopore (inner cavity
B. Gastrula implants into the wall of uterus. D. Blastula is a hollow mass of cell.

C 27. When laying eggs, a female insect returns to her larval host plant, even though she has not fed upon thi
plant during her adult life. This is an example of:
A. Conditioning B. Habituation C. Inate/Imprinting/ D. Instrumental learnir

A 28. Which one is false regarding to the components of ovaries in birds?
A. Infundibulum produces yolk of egg. C. Uterus forms hard shell.
B. Magnum secrets albumen D. Isthmus produce & adds Sulphur containing amino acids in eggs

E 29. Assume you are grown in another family separately from your biological parents, then which one of th
following is true about you?
A. Your innate is the same to your both families.

B. Most of your behaviors are similar to adopting family than your biological family. ✓

C. Most of your behaviors are similar to your biological family than your adopting family. ✗

D. Most of your learned behaviors are similar to none of your both families. ✗

E. Both A & B are true.

C 30. Which of one the following pairs is not correct combinations between vector & pathogen?

A. F. A. Mosquito, Plasmodium. — C. C.Mosquito, Leishmania ✗

B. Tsetse fly, Trypanosoma — D. House fly, Ameoba ✓

A 31. Which pest of stored grain (cereal) is the most distractive species?

A. Rice weevil (Sitophilus oryzea) — C. Lesser grain borer(Rhyzoprthhra dominica)

B. Sawtooth grain beetle(Oryzaephilus surinamensis) — D. Flat grain beetle(Cryptolestes species)

E 32. Which one is false about Blister beetles?

A. They produce a powerful protein blocker called Canthadian ✓

B. Their chemical product is effective for sever viral infections (HIV) ✓

C. One of their chemical products reacts with & blocks the genetic material of Cancer cells. ✓

D. They eat masses of locust eggs. ✓

E. Their chemical product is essential for leather manufacturing. ✗

Wish you all the best !

Name: Muhamma Menak — Grade: 11 C — No: 33 — 37

True or false — 10

1. False
2. True
3. True
4. True

Match

1. C
2. E
3. D
4. G
5. B
6. I
7. F

Multiple choices — 27

1. B
2. C
3. A
4. B
5. A
6. D
7. A
8. D
9. B
10. C
11. D
12. A
13. A
14. B
15. D
16. A
17. C
18. A
19. A
20. A
21. D
22. A
23. B
24. D
25. B
26. B
27. C
28. A
29. D
