Blessed G/Michael Catholic Secondary School

First Semester Agriculture Second mid exam for Grade 11th

December, 2018 E.C **Time allowed 40' min.**

Name M. M **Section** 13 C **No** 22

Part I. Choose the best answer among the given alternatives.

B 1. Which of the following is considered a high- energy feed for livestock?

A. Alfalfa hay B. Maize grain C. Urea D. Wheat straw

A 2. Which feed ingredient is highest in crude protein content?

A. Cotton seed cake B. Barley grain C. Rice bran D. Molasses

B 3. Which mineral is the most critical for egg shell formation in poultry?

A. Phosphorus B. Calcium C. Magnesium D. Potassium

D 4. Which of the following by product feeds would have the highest protein content?

A. Wheat bran B. Corn bran C. Wheat straw D. Soybean meal

A 5. Among the following forms of extensive production system, which one involves relatively a better livestock management?

A. Ranching B. Agro-pastoralist C. Nomadism D. Transhumance

B 6. Which of the following sentence is NOT correct about sisal crops?

A. Used for paper making and polishing cloths C. The crop can grow in a wide range of altitude.

B. Propagated by seed propagation D. Leaves are ready for harvest when they rich at a height 1.2m.

A 7. Which of the following sentence is false about sugar crops?

A. Sugar cane is only used for making table sugar.

B. Sugar cane is a tropical and sub-tropical crop.

C. Sugar cane is propagated mainly through stem cutting.

D. It is grown on soils with poor fertility.

E 8. Which type of farm animal is often used to pull plows on traditional farms?

A. Small ruminant B. large ruminant C. Equine species D. Avian E. B&C

B 9. Ruminant animals are primarily digest their food through----------

A. Enzymes in the small intestine C. Chewing only

B. Microbial fermentation in the stomach D. stomach acid alone

A 10. Where do chickens store food before it enters the stomach?

A. Crop B. Cloaca C. Gizzard D. small intestine

B 11. Which organ is the primary site of microbial fermentation in horses?

A. Stomach B. Cecum C. Small intestine D. Colon

E 12. Which of these crops produces hard fiber used for the production of carpets, sacks and ropes?

A. Cotton B. Lint C. Sesame D. All E. None

C 13. The local breeds have the following economical important traits, which one is it?

A. They can survive and are produce on high quality feed resources

B. Local breeds are usually considered high in their productivity

C. Local breeds resistant to many tropical diseases

D. Indigenous breeds are easy manageable than exotic breeds

D (14) Which of the following is NOT true about roughage feeds?

A. It contains more than 18%& 60% CF & TDN respectively.

B. Dry roughage contains about 60-70% DM contents 80-90%

C. Roughage have a high energy and low protein content

D. All are not correct

C 15. Which one of the following is not a socio-economic constraint of animal production?

A. Poor infrastructure C. Diseases problems

B. Weak extension service D. Shortage of appropriate technologies

E 16. Which one of the following livestock feed is not agro-industrial by-product?

A. Molasses B. Wheat bran C. Wheat middling D. Soybean meal E. none

A (17) Which one of the following feed resource is not a type of roughage?

A. Molasses B. Straw C. Hay D. Rice husk

D 18. Which of the following is a NOT characteristic of concentrates feeds?

A. Rapid digestibility B. Low fiber content C. Support production goals D. low cost

D 19. Which one is true about energy-rich concentrates feeds for livestock's?

A. Low in fat content B. High in carbohydrate's C. less than 18% CP D. All E. none

B (20) Which statement is true about the characteristics grasses? cheap, bulky, high yield, fibrous

A. They improve soil fertility through nitrogen fixation B. More tolerant poor soils

C. Have high protein content than legumes D. More Palatable than legumes

B 21. Which type livestock feed is more digestible and palatable?

A. Mature grasses B. Legume fodder C. Straw from cereals D. Crop residue

D 22. Which of the following is always true about social insects for honey bee?

A. for pollination B. maintains biodiversity C. food production D. all E. none

A 23. Which types of livestock system is most suitable in arid and semi-arid regions?

A. Nomadic pastoralism B. Sedentary livestock farming

C. Intensive dairy farming D. Industrial poultry farming

C 24. The aim of the system is to make use a distant pasture during rainy season and what remain after harvest around farm house?

A. Nomads B. Ranching C. Transhumance D. Pastoralism E. Mixed farming

Part II: - Match items under column A with items under column B

A	B
C 25. Bagasse	A. Crop processing and separation
D 26. Reticulum	B. Pepsin and rennin enzyme are produced
B 27 Abomasum	C. Fibrous residue left after the extraction
A 28. Threshing	D. It helps regurgitation
E 29. Rice polish	E. Concentrate feed
	F. Roughage feed

Part III- Fill the blank space provided.

30. Decortication in sisal crops refers to the process of extracting sisal fiber from the leaves of sisal plants.
