Blessed G/Michael Catholic Secondary School

2nd Semester Agriculture Mid Exam for Grade 12th

March, 2018 E.C

Time Allowed 45'

Part I: - Choose the best answer Among the given alternatives.

D 1. Why do farmers choose small ruminants instead of large ruminants?

A. They require less feed and space ✓

B. They reproduce faster ✓

C. They need lower initial investment ✓

D. All of the above

C 2. Which one of the following represents a key benefit of raising small ruminants?

A. High feed requirements B. Need large grazing land C. Low initial cost ✓ B. Slow reproduction

B 3. What process is referred to as weaning in sheep and goat production?

A. Giving birth to young animals

B. Separating young animals from their mother's milk

C. Feeding animals only grass

D. Vaccinating young animal

B 4. Which of the following sheep breeds originates from Ethiopia?

A. Merino B. Adilo C. Boer D. Dorper

A 5. Which of the following goat breeds are a cross breeds?

A. Boer breed B. Dorper breed C. Awassi breed D. Woyito-Guji

A 6. Which of the following diseases affecting sheep and goats is NOT caused by bacteria?

A. Rift valley fever B. Maedi-visna C. CCPP D. Sheep and goat pox

D 7. Which livestock species produces milk with the highest fat and protein content?

A. Goat B. Sheep C. Cow D. Camel

A 8. What is the primary product obtained from camels in pastoral and arid regions?

A. Milk B. Meat C. Leather D. Wool

B 9. Which of the following correctly distinguishes sheep from goats?

A. Sheep are browsers; goats are grazers

B. Sheep have wool; goats have hair

C. Sheep produce milk; goats do not

D. Goats are herbivores; sheep are carnivores

B 10. Which of the following is a unique feature of camel production?

A. High milk yield with easy cheese production

B. Ability to survive long periods without water and feed.

C. requires intensive feeding and managemen

D. Produces multiple offspring per year

C 11. Which lake is the largest and most important fishery production in Ethiopia?

A. Lake Ziway B. Lake Hawassa C. Lake Tana D. Lake Abaya

B 12. What is a key reason for the low expansion of aquaculture in Ethiopia?

A. Lack of demand for fish
C. Excessive production
B. Limited technical knowledge and training
D. No suitable species

C 13. Which fish family does Nile tilapia, a major species in Ethiopian aquaculture, belong to?

A. Cyprinidae B. Clariidae C. Cichlidae D. Mormyridae

D 14. What is the practice of raising only male or only female individuals of a single fish species called?

A. Polyculture B. Poly-sex culture. C. Mono culture D. Mono-sex culture

B 15. Among the following types of poultry, which requires the highest protein content in its diet for optimal growth?

A. young chick B. Broiler C. Layer D. Pullet

B 16. Which type of fish feed provides the highest protein content for optimal growth?

A. Natural plankton B. Complete formulated feed C. Wheat bran only D. Rice straw

D 17. Which of the following traits should be considered when selecting a good sheep breed to ensure high **productivity, adaptability,** and **profitability**?

A. Tail shape and horn size only
C. Eye color and ear length
B. Wool color only
D. Growth rate, reproduction and disease resistance

A 18. Which of the following statements correctly compares goat milk and sheep milk?

A. Goat milk has higher fat and protein content than sheep milk.
B. Sheep milk is richer in fat and protein, making it ideal for cheese production.
C. Goat milk has higher solids, making it better for cheese than sheep milk.
D. Sheep milk is easier to digest than goat milk.

B 19. Which of the following statement is true about cannibalism in poultry?

A. Cannibalism improves growth and egg production.
B. Cannibalism occurs due to stress, overcrowding or nutrient deficiency.
C. Cannibalism is a normal behavior that does not require management.
D. Cannibalism only occurs in outdoor free-range systems.

D 20. How many drones typically mate with a queen bee during her mating flight?

A. 1–2 drones B. 10–20 drones C. 5–10 drones D. 50–100 drones

B 21. Worker bees are the other cast of the honey bee colony, which among the following is the activity performed by the worker bee in their life?

A. Feeding queen bee B. Feeding the brood C. produce pheromone D. A&C E. A&B

A 22. Which beekeeping machine is used to spin honey out of uncapped combs?

A. Honey extractor B. Hive tool C. Smoker D. Queen excluder

B 23. Which preservation method removes moisture from fish to extend its shelf life?

A. Boiling B. Drying C. Frying D. Fermentation

24. Why does camel milk not coagulate easily during processing?

A. Its proteins have a different structure that resists coagulation
B. It contains too much water
C. It has no fat content
D. It spoils very quickly

25. What do "hive reducing" and "supering" mean in beekeeping?

A. Hive reducing = adding extra boxes; Supering = removing boxes
B. Hive reducing = decreasing hive space; Supering = adding extra boxes for honey storage
C. Hive reducing = feeding bees; Supering = harvesting honey
D. Hive reducing = cleaning the hive; Supering = moving the hive

Part II:- Match items under column B with their correct matches under column A.

A	B
26. Clarias	A. Herbivorous fish
27. Tilapia	B. Detrivorous
28. Liver flukes	C. Thorny bushes
29. Cestodes	D. Trematodes
30. Kraal	E. Tape worms
	F. Scavengers

27
V. good

Part III: - Bonus Give short answer

31. As a fisheries expert in Lake Tana, what are the **main human-made** and **natural problems** threatening the lake, and **what strategies can be implemented** to address them? **Please is your handwriting clear and readable?**

1

Answer Sheet

Name Hanna Ayalew Section 12th C No. 24.

1. D	6. A	11. C	16. B	21. BE	26. F
2. C	7. D	12. B	17. D	22. A	27. B A
3. B	8. A	13. C	18. A B	23. B	28. D
4. B	9. B	14. D	19. B	24. A	29. E
5. A	10. B	15. B	20. D B	25. B	30. C

(31) at the back of this page.

(31). Human-made problems - excessive use of fertilizers
- Overfishing

Natural problems - algal bloom due to the fertilizers ("enbochi")
caused and facilitated by human activities) - increasement of delta (land) around the lake.
- reduction of dissolved oxygen for the fishes.

Strategies recommended - controlling the drainage of agricultural chemicals to the lake.
- implementing controlled fishing.

15/15 ... Excellent!

Blessed G/Michael Catholic Secondary School
2nd Semester Agriculture quiz for Grade 12th

March, 2018 E.C

Time allowed 20 min.

Name Hanna Ayalew Section 12th C No 24

I. Choose the best answer among the given alternatives.

B 1. Which of the following is the main advantage of camels in arid areas?
A. High meat production
B. Ability to survive long periods without water
C. High wool production
D. Fast growth in cold climates

B 2. Which physiological adaptation helps camels survive dehydration?
A. Large lungs
B. Ability to tolerate high body temperature fluctuations
C. Thick bones
D. Small stomach

C 3. How long does it take for a chicken egg to hatch during incubation periods?
A. 14 days B. 18 days C. 21 days D. 30 days

A 4. Which type of management practice improves camel reproductive efficiency?
A. Controlled breeding
B. Overfeeding
C. Continuous grazing only
D. Isolation

A 5. Camel milk contains less of which component compared with cow milk?
A. Lactose B. Fat C. Minerals D. Water

B 6. What are the causes of Swarming in honey bees, which one is it?
A. Lack of food B. Colony overcrowding C. Cold temperature D. Lack of queen

B 7. Which caste of honey bees is responsible for producing royal jelly in the colony?
A. Queen bee B. Worker bees C. Drone bees D. Larvae

B 8. Which type of hive is the most widely used in modern commercial beekeeping?
A. Top-bar hive, B. Langstroth hive C. Mud hive D. basket hive

B 9. How does stocking density in fish ponds affect fish growth and overall pond productivity?
A. Fish color only B. Fish growth and survival C. Pond size only D. Water temperature only

A 10. Which disease in poultry is caused by a virus and leads to high mortality?
A. Newcastle disease B. Coccidiosis C. Salmonellosis D. Fowl cholera

B 11. In layer poultry production, lighting management mainly influences which aspect of the flock's performance?:
A. Feather color B. Egg production C. Body size D. Feed taste

B 12. What is the primary aim of biosecurity measures in poultry farms?
A. Increase egg color
B. Prevent disease introduction and spread
C. Reduce feed intake
D. Increase noise

A 13. Which scientific name is most commonly used for the honey bee in Ethiopia?
A. *Apis mellifera* B. *Apis cerana* C. *Apis dorsata* D. *Apis florea*

D 14. Which one of the following traits is NOT considered in breed selection?
A. Conformation B. Adaptation C. Feed consumption D. body weight gain

part II: - Give short answer

15. In the hive of Honey Bee, What do bees do if a Snake or another large animal dies inside the hive?
- They use their chemical (propolis) to disintegrate and remove the body
