Blessed G/Michael Catholic Secondary School

2nd Semester Agriculture test two for Grade 12th

May, 2018 E.C

Time allowed 40 minutes

Name --Hanna Aylalew----------Section ---12th C----------No--24-------

I. Write 'True' if the statement is correct and write 'False' if the statement is incorrect.

True 1.Proper spacing in plantations reduces competition for nutrients, light and water.

False 2.Seedling raised under shade should be transplanted directly in to harsh sunlight without hardening.

True 3.Agroforestry systems not only improve biodiversity but also enhance farm productivity.

True 4. Afforestation and reforestation not only contribute to watershed protection but also reduce carbon sequestration

False 5.The conservation of tillage completely remove crop residue from the soil surface.

True 6. Sunken beds not only conserve soil moisture and reduce evaporation losses from the soil surface.

II. Match items under column B with their correct matches under column A.

Column A	Column B
F 7. Gender equity	A. cutting back branches to reduce size
E 8. Gender equality	B. removing dead or unwanted branch to improve growth
B 9. Pruning	C. removing some tree to reduce competition
C 10. Thinning	D. social difference men and women
	E. equal rights and opportunities
	F. fair treatment based on their difference needs to achieve equal out comes

III. Choose the best answer from the given alternatives.

C 11. Which one is the best example of biological soil conservation practices?

A. Stone bunds B. Terracing C. Alley cropping D. check dams

C 12. Which of the following is a primary objective of tillage?

A. Increasing soil compaction C. preparing a suitable seed bed for crop growth

B. Reducing soil fertility D. Preventing seed germination

A 13. Which statement best describes the purpose of root pruning in nursery management practices?

A. To improve transplant survival C. To eliminate the need for watering seedling

B. To promote uncontrolled root elongation in seedling D. To damage roots and reduce plant growth

B 14. Which one is a soil and water conservation practices?

A. Overgrazing B. Contour plowing C. deforestation D. burning crop residues

A 15. Which of the following helps to reduce land degradation?

A. afforestation activity B. Deforestation C. Excessive chemical use D. continuous plowing

A 16. What are the main purposes of grass strips in soil and water conservation?

A. To reduce soil erosion C. To remove all vegetation

B. To increase wind speed across filed D. To increase crop production

D 17. Which of the following is considered as sources of contamination?

A. Human and animal excreta B. polluted water C. Cooking Utensils D. All of the above

A 18. Which of the following best describes an agrisilvicultural System in Agroforestry?

A. Integration of trees with agricultural crops C. Cultivation of trees only for timber production

B. Integration of livestock with pasture land D. Combination of fish farming and crop production

B 19. How do Agroforestry systems primarily enhance the resilience and sustainability of farming systems?

A. By increasing dependence on a single crop C. By reducing biodiversity within the ecosystem

B. By diversifying farm production and income sources. D. By accelerating soil degradation and land loss

C 20. Which of the following best explains the composition of an Agrosilvopastoral System in Agroforestry?

A. Integration of crops only C. Integration of crops, trees, and livestock on the same land unit

B. Combination of trees and industrial activities D. Combination of livestock production and fisheries on

D 21. Which of the following is a widely used high-protein fodder tree in silvopastoral systems?

A. Maize B. Leucaena C. Wheat D. accacia

B 22. What is the primary purpose of root pruning in Agroforestry systems?

A. To increase competition between trees and crops C. To completely stop tree growth

B. To reduce competition for water and nutrients D. To increase soil erosion

B 23. Which soil property is most directly improved by Agroforestry systems through organic matter addition?

A. Soil compaction B. Soil fertility C. Soil salinity D. Soil pollution

B 24. What does soil texture refer to in soil science within Agroforestry systems?

A. Soil colour and smell C. Amount of organic fertilizer applied

B. Proportion of sand, silt, and clay particles D. Soil temperature variation

B 25. What is the main purpose of area closure in Agroforestry and land restoration practices?

A. To convert forests into farmland C. To increase grazing pressure

B. Recovery by excluding human and livestock interference D. To promote continuous cultivation

A 26. Which practice is considered an agronomic soil and water conservation method?

A. Contour plowing B. Road construction C. Deforestation D. Open grazing

B 27. What is the main function of grass strips in Agroforestry and soil conservation systems?

A. To increase soil erosion C. To replace all crop production

B. To reduce runoff velocity and control soil erosion D. To increase water loss from soil

A 28. Gender mainstreaming is important in agricultural development because it:

A. Ensures inclusive and sustainable development C. Limits community participation

B. Reduces productivity D. Increases inequality

B 29. What is the importance of hardening off in nursery management?

A. Increasing seed dormancy C. Reducing plant growth permanently

B. Preparing seedlings for field conditions D. Increasing fertilizer use

D 30. What is the primary environmental condition that leads to etiolation in plants within Agroforestry systems?

A. Excessive sunlight exposure. C. Strong wind conditions

B. High soil nutrient availability D. Low or complete absence of light
